Two student scholarships of \$500 each, plus full registration, are available.
Please contact Gillian Todd for criteria and further information.

Background information

The New Zealand Land treatment Collective ('the Collective') was established in 1989 to support research on treatment of waste products by land application. We provide members with the most recent information on land treatment technology, research and information, and improve communication to all stakeholders in the industry. The Collective is managed through and based at Scion, where land treatment of waste products has been researched since 1978. Many other New Zealand organisations are also involved in land treatment research, most of whom are members of the Collective.
